CITY OF ST. PETERS

2016 PAVEMENT MANAGEMENT PROGRAM

FOREWORD

The purpose of the City of St. Peters pavement management program is to provide well-maintained, high quality streets, sidewalks and traffic control systems at the lowest reasonable cost. Planned levels of maintenance must be carefully correlated with available funds to achieve the best possible level of service across the City.

This program book lists the streets, sidewalks, street signs, pavement markings and traffic signals scheduled for repair or replacement during the coming season in each political ward of the City. Prior to the individual ward sections are summary lists for scheduled sidewalk, concrete and asphalt street repairs, sign replacements, traffic signal improvements, and pavement marking operations. All projects are listed in order of need. Listings of all projects, in the general order they will be performed, will be available at the Street Department website, www.stpetersmo.net. These listings will be updated periodically as the projects are completed, or conditions warrant a schedule change.

In addition to the 2016 repair projects, listings of tentative repair and maintenance projects for 2017, which are currently un-funded, are shown.

Street, sidewalk and traffic system repair and maintenance are hazardous and stressful jobs, which may not be understood by the general public. Operations are performed in the public road right-of-way during hot weather, and often under heavy traffic conditions. We thank those individuals who give their dedication and best effort in carrying out the details of this program.

Ward 3 Projects and Pavement Ratings . . . . . .59 - 62

Ward 4 Projects and Pavement Ratings . . . . . 63 – 66

2016 Pavement Rating Summary . . . . . .67 - 185

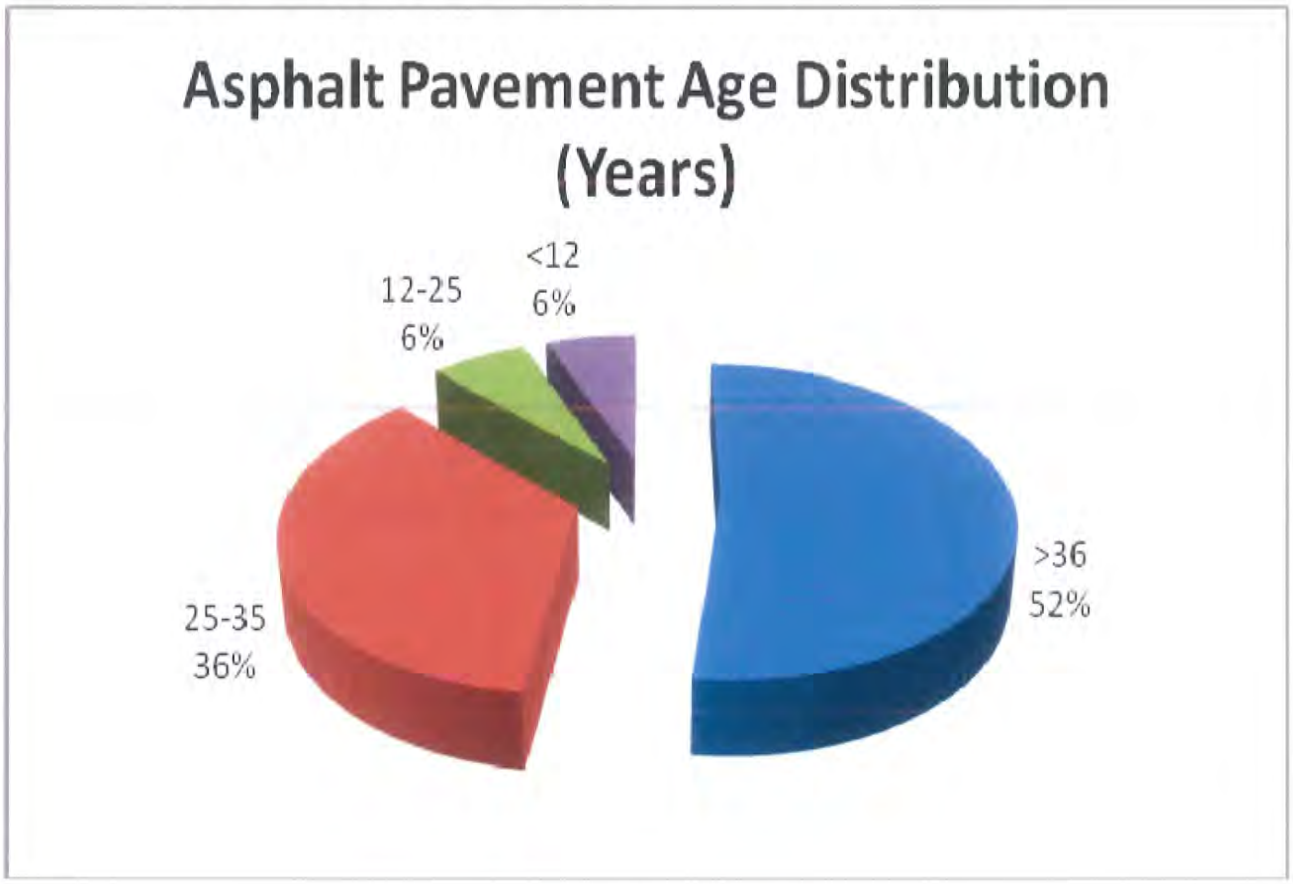
PAVEMENT MANAGEMENT SYSTEM STRATEGY

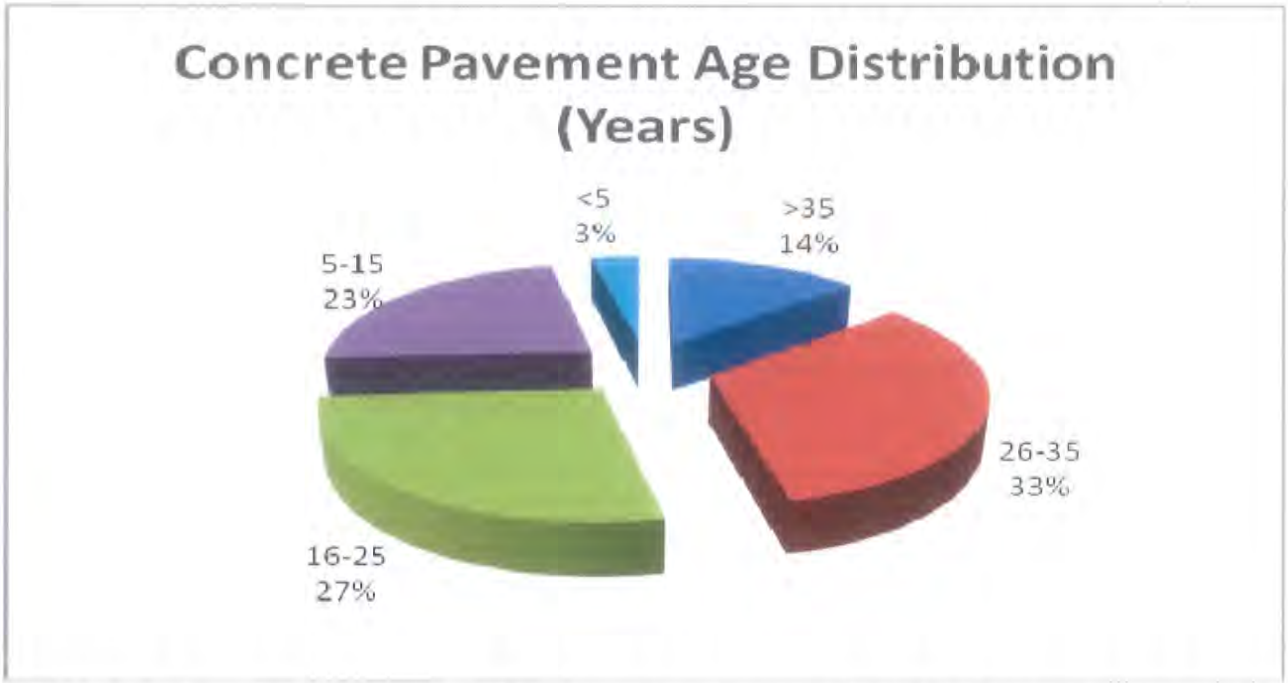
The Transportation and Development Services Group is responsible for the maintenance of approximately 547 lane miles of streets. Approximately 195 lane miles (36%) of the streets are constructed of asphalt and 353 lane miles (64%) are constructed of concrete. As the City's streets continue to age, more effort and financial resources will be required to maintain the current level of service condition.

The American Concrete Pavement Association states that properly installed concrete pavements useful life is 30 years. The Asphalt Institute states that the average useful life of properly installed asphalt pavements is 17 years. Both organizations state that periodic crack sealing and miscellaneous spot repairs are generally necessary before full replacement is required.

It has been the City St. Peters' experience that major maintenance is generally required for asphalt streets, between the ages of 10 to 12 year, and for concrete streets, between the ages of 15 to 20 years. The increased frequency in maintenance is primarily due to less than optimum sub-grade conditions. Prior to 1998, concrete and asphalt streets in the City were constructed directly on a compacted soil sub-grade. Since 1998, all new pavement placed in the City of St. Peters must be constructed on four inch thick aggregate rock base. The addition of the aggregate rock base provides a harder, more stabile base, for the pavement, thus extending pavement life.

The following graphs show the aging distribution of the City's pavements:





Referencing the aging distribution graphs above, it can be seen that 13% of concrete streets within the City of St. Peters have met or exceeded their expected useful life of 35 years and 87% of the City's concrete streets have reached an age where periodic slab replacement is required. By contrast, 96% of the asphalt streets have reached an age that requires periodic overlays be performed.

In order to provide planned and orderly maintenance of streets, the City of St. Peters has instituted this pavement management program, which uses a computer database containing a maintenance record of each city street. This database includes the name, length, width, street material, dates and quantities of maintenance operations, and current pavement condition or street rating.

All streets in the City of St. Peters are rated using the "PASER" rating system, developed by the University of Wisconsin. The "PASER" system rates pavement based on the number and type of pavement distresses. Pavement is rated on a scale of 1 to 10, with 10 being new or like new. The database is sorted, based on the "PASER" ratings, to formulate lists of streets that require maintenance or repair, and to establish maintenance priority and schedule. In addition, the City of St. Peter's resident concern system is also used to identify locations where street repair or maintenance may be necessary.

It is the goal of the City of St. Peters' Pavement Management Program to achieve a 12-year overlay cycle for asphalt streets, and a 35-year replacement cycle for concrete streets. To achieve this goal, the City of St. Peters must overlay approximately 118,000 square yards of asphalt pavement, approximately 32,700 lineal feet of concrete curb replacement, and replace approximately 65,200 square yards of concrete pavement annually. Currently, the program is funded to overlay approximately 111,348 square yards of asphalt pavement and replace approximately 33,425 square yards of concrete pavement. The City's annual pavement maintenance funding also includes additional repair treatments such as crack sealing, joint repair, and pothole patching.

SIDEWALK MAINTENANCE AND INFILL PROGRAM

The City of St. Peters maintains approximately 501,600 lineal feet (95 miles) of sidewalks and 507 accessible ramps within its corporate limits. These sidewalks and accessible ramps service both residential and commercial areas and are constructed of concrete. Accessible, well maintained sidewalk networks provide safe and efficient travel for pedestrian traffic, promotes a healthy lifestyle and is environmentally friendly. Furthermore, providing a stable path, which separates pedestrian traffic from vehicular traffic, improves the overall safety of city streets.

It is the policy of the City of St. Peters to ensure that its sidewalks are accessible and maintained in good condition. To this end, the City of St. Peters Transportation and Development Services (TDS) Group administers a sidewalk maintenance and infill program to provide well-maintained, accessible, high quality sidewalks and accessible ramps at the lowest reasonable cost.

The City of St. Peters' Sidewalk Maintenance Program and Infill Program consists of two phases. Phase one consists of an annual survey of all sidewalks within the City of St. Peters corporate limits. To perform the survey, all the sidewalks in the city are broken in to segments, with boundaries generally between intersections. City streets with sidewalks on both sides contain two sidewalk segments. The sidewalks are inspected for one of eight defect types, which can impact the safety and/or aesthetics of the sidewalk, and compliance with current Americans with Disabilities Act (ADA) standards. The results of this annual inspection are recorded in a database for use determining future repair and improvement projects.

Below is a summary of the defect types recorded:

Sidewalk with defect Type A
-Vertical edge of ¾" or more.

Sidewalk with defect Type A at storm drain
-When the sidewalk rises, or lowers in respect to the drain, it can cause different types of defects, here type A.

Sidewalk with defect Type B
-Raised more than 3 inches in a 10-foot run.
-Depressed more than 3 inches in a 10-foot run.

Sidewalk with defect Type C
-Has cracked into more than 2 pieces per square
-Cracks have horizontal separations equal to ¾" inch or more.

Sidewalk with defect Type D
-Sidewalk has spalled over 50% of the surface.

Sidewalk with defect Type E
-The sidewalk has horizontal separation of ¾" or more.

Sidewalk with defect Type F
-The sidewalk has vegetation or debris covering 50% or more of the surface.

Sidewalk with Multiple Defects
-Square exhibits more than one type of defect. (Type C & F shown)

Phase two of the sidewalk maintenance program involves the evaluation of the inspection results to prioritize and schedule annual repair projects. To ease the project evaluation process, as with city streets, all the sidewalk segments identified are rated on a scale of one to ten. The sidewalk rating assigned is based on the type and severity of the defect found. Priority is given to sidewalk segments with Type A, Type A with Storm Sewer Inlets, and accessible compliance defects. These types of defects pose the greatest risk to pedestrian and bicycle traffic and to accessible travel.

In compliance with current ADA standards and requirements, the City's Sidewalk Maintenance and Infill Program serves as the City of St. Peters' ADA Transition Plan with the goal to provide safe, accessible routes for all pedestrians within the bounds of the program's annual budget. City of St. Peters sidewalk systems will be improved to current ADA standards in conjunction with scheduled asphalt resurfacing, large scale concrete pavement replacement projects (project involving replacement of greater than 50% of the pavement surface within the project limits), approved federal aid projects, traffic signal/intersection improvement projects, and other projects with sidewalk and trail elements.

With approximately 95 miles of sidewalks and 507 accessible ramps to be maintained, it is important that a systematic approach be used to ensure the City of St. Peters' sidewalk and trail systems operate safely. The 2016 sidewalk maintenance program is currently funded to replace approximately 22,425 square feet of concrete sidewalk, 42 storm inlet tops that serve as part of the sidewalk surface, and 725 square feet of accessible ramps. It is the goal of the sidewalk maintenance and infill program to provide a safe, accessible and functional sidewalk system.

2016 ENHANCEMENT MAINTENANCE PROJECTS

2016

Decorative Concrete Sealing	SF	Repair
Grand Teton Drive @ Mexico Road	8,814	Seal Only
Spencer Road @ Mexico Road	1,654	Seal Only
Mexico Road @ Mid Rivers Mall Drive	6,818	Seal Only

2017

Decorative Concrete Sealing	SF	Repair
Main Street (Old Towne)	11,929	Seal Only
St. Peters Centre Blvd @ Mexico Road	7,800	Seal Only
Executive Centre Parkway	2,000	Seal Only

The City of St. Peters maintains approximately 79,475 square feet of raised islands with stamped and stained concrete. These islands require periodic sealing and re-staining every three years. It is the goal of the City's decorative island program to repair and maintain islands and medians so they remain an attractive asset to the community.

PAVEMENT MARKING AND SIGN MAINTENANCE PROGRAMS

As the City of St. Peters has grown, the City has developed an extensive traffic control network consisting of street signs, pavement markings, traffic signals and streetlights. These systems work together to safely and efficiently move motorists and pedestrians into and out of the City. In order to ensure that these systems operate properly, the Street and Traffic Departments, within the Transportation and Development Services Group (TDS), have developed several maintenance programs designed to provide up-to-date, well-maintained traffic control systems, at the lowest possible cost. Below is a summary of the traffic maintenance programs and a listing of planned work for the 2016 maintenance season.

Street Sign Replacement Programs

The City of St. Peters owns and maintains approximately 7,196 street name and regulatory signs on 3,814 posts, within its corporate limits. These signs provide important information to motorists that allow them to get to their destination safely and efficiently. The City of St. Peters follows current Manual for Uniform Traffic Control Devices (MUTCD) standards for the design and placement of all its roadway signage. It is the policy of the City of St. Peters to ensure that all street signs are aesthetically pleasing, clearly legible and maintained in good condition. To this end, the City of St. Peters Street Department is administering a Street Name Sign Replacement Program and has developed a regulatory sign replacement program. It is the goal of both programs to provide well-maintained, high quality signage, at the lowest reasonable cost.

The City of St. Peters currently owns and maintains 2,527 street name signs. City of St. Peters street name signs (see picture below) feature the City of St. Peters logo. In addition to providing a sense of place, City street name and stop signs are placed on the same post to reduce the number of post in the systems. This consolidation reduces future maintenance liabilities for the City and eases yard maintenance around the sign.

The Regulatory Sign Replacement Program involves the maintenance of a sign inventory; assessment of current sign condition and the scheduled, periodic replacement of all regulatory signs (i.e. stop signs and speed limit signs). The City of St. Peters currently owns and maintains 4,669 regulatory signs. These signs have been located using GPS equipment and assigned a condition rating of Good (like new condition), Average (acceptable) and Poor (requires replacement). This condition rating is then used to allow the Department to proactively replace damaged or worn signs.

Industry standard for sign life is ten years. Based on this expected life cycle, the Street Department expects to replace up to 710 regulatory signs and 250 street name signs each year.

Pavement Marking Programs

The City of St. Peters maintains approximately 751,000 lineal feet of reflective pavement markings, 1,250 center turn arrows and 180 marked intersections. These markings improve intersection safety and efficiency by providing channelized traffic flow and visual cues for drivers. It is the policy of the City of St. Peters to ensure that all pavement markings are clearly visible and maintained in good condition. To this end, the City of Street Department administers various pavement marking maintenance programs with the goal to provide well-maintained, high quality pavement markings, at the lowest reasonable cost.

The Street Department defines long line markings as all pavement markings that run parallel to the centerline of a roadway. The Street Department contracts long line markings operations, which are performed once a year, generally in April. The specifications for long line markings are modeled after Missouri Department of Transportation (MoDOT) standards and include retro-reflectivity standards, which require the line to achieve an initial brightness standard. A majority of the City's pavement markings are paint, which has a useful life of twelve months. However, in instances where pavement-resurfacing operations will take place, the Street Department will contract the placement of more durable markings, such as thermoplastic or epoxy markings. These durable markings have a useful life of three to five years, resulting in reduced annual maintenance costs.

The Intersection Marking Program includes the placement of turn arrows, stop bars and cross walks at 130 separate intersections. This work is performed by Street Department personnel and is generally performed in late spring and throughout the summer. This program also includes the repainting of center turn arrows.

In addition to pavement markings on public streets, the Street Department also performs facility parking lot marking and has established a five year cycle to repaint parking stalls, cross walks and other delineations at various city facilities.
